

Web Applications Development/Design of Web-Based Applications

Portfolio Website Project

React Framework + GitHub Hosting

Total Grade: 20 Marks

Dr Coordinator: Rahma Tolba

Instructors: AL/Ibrahim Ayman Tagen,

TA/Hadeer Khaled, TA/Reem Khaled, & TA/Juliana Nader

Project Description

In this project, you are required to build a **responsive personal portfolio website** using **React.js** and deploy it using **GitHub Pages**. The project will be implemented step-by-step through multiple components, and by the end, each student must have a **complete, real, and functional portfolio**.

The final outcome should include:

- A complete React portfolio website
- Responsive design (Desktop / Tablet / Mobile)
- Reusable components structure
- Interactive UI elements and animations
- Hosted live version (GitHub Pages)

Your portfolio must include the following sections:

1. **Navbar Component**

- Navigation bar at the top of the page
- Contains links:
 - Home
 - Skills
 - Projects
 - Contact
- Includes logo and social icons
- Built using **React-Bootstrap Navbar**

Purpose: Navigation between sections using IDs

2. **Banner Component (Home Section)**

- First section shown to the user
- Contains:
 - Your name
 - Your role (Developer / Designer...)
 - Short description about you
 - Profile image
 - “Let’s Connect” button

3. **Skills Component**

- Displays your technical skills
- Each skill includes:
 - Skill name
 - Percentage or level

4. **Projects Component**

- Displays your real projects

5. **Contact Component**

- Contact form for user interaction

Fields:

- First Name
- Last Name
- Email
- Phone
- Message

6. **Footer Component**

- Last section of the page

Contains:

- Logo
- Social media links
- Copyright

From a technical perspective, you are expected to set up the React project correctly, organize the application into reusable components, and integrate the required libraries to achieve both functionality and design requirements.

Finally, each student is required to submit a **public GitHub repository containing the complete source code**, along with **a live deployed version of the portfolio website** using GitHub Pages. A sample design is provided for guidance and inspiration, and can be accessed through the following link: <https://ibrahimaymannn.github.io/portfolio-website/>
